Professional Summary

Final-year B.Tech Electronics & Computer Engineering student (2022–2027) at MIT ADT University, building systems that sense the physical world — computer vision, audio analysis, and IoT — and turn them into useful products. Shipped a computer-vision smart trolley with automated billing, a RAG-based forensic audio analyzer, and a face-and-fingerprint attendance tracker. Seeking internships and full-time roles at product-based companies where hardware and software meet: embedded systems, IoT, consumer electronics, or AI-powered products.

Education

MIT ADT University, Pune 2022 – 2027
B.Tech, Electronics & Computer Engineering (Pursuing)
Relevant Coursework: Machine Learning, Data Structures, Algorithms, Databases, IoT

Dayanand Science College, Latur 2022
Class XII (HSC), Science with Mathematics *77.50%*

Shree Sadanand Mahavidyalay, Latur 2020
Class X (SSC) *93.60%*

Technical Skills

Languages:	Python, SQL, JavaScript
Hardware / IoT:	Sensor Integration, Embedded Prototyping, Real-Time Data Systems, Computer Vision
AI / LLM:	RAG (Retrieval-Augmented Generation), LangChain, Prompt Engineering, NLP
Libraries:	Pandas, NumPy, Matplotlib, SQLAlchemy, OpenCV
Frameworks:	Flask, Firebase, Full-Stack Development
Currently Learning:	PyTorch, Transformers, Hugging Face, LLM Evaluation

Projects

Smart Trolley with Automated Billing *Jan 2026 – Present* GitHub
- Building a self-following retail cart combining computer vision, IoT sensors, and autonomous navigation for real-time item detection and automated billing; 94% detection accuracy across 20 product types.
- Firebase-backed companion app syncs cart data, billing status, and user sessions in real time.

Forensic Audio Analyzer (RAG) *Mar 2026 – Present* GitHub
- Combined RAG with Python and an API to analyze voice recordings for authenticity; tested on 10 recordings with 88% correct classification.
- Built a forensic-grade speech transcription pipeline for signal analysis and result verification.

AI Resume Builder (NLP) *Oct 2025* GitHub
- Built an NLP-powered tool that parses user input and generates ATS-friendly resumes in 10 seconds; tested with 50 users.

Attendance Monitoring System *Completed*
- Implemented face and fingerprint recognition for real-time attendance with timestamp logging (CSV/SQLite); 95% recognition accuracy across 50 enrolled users.

Developer Portfolio *2026* GitHub Live
- Hand-built portfolio site (HTML, CSS, vanilla JavaScript) with dark mode, mobile nav, AJAX contact form, and a print stylesheet; deployed on GitHub Pages.

Certifications & Training

- AI in Healthcare: Opportunities (Workshop) – IIT Madras
- Python; Flask with Full Stack Web Development – LinkedIn Learning
- JavaScript Algorithms & Data Structures – freeCodeCamp
- SQL Essential Training – NASBA

Achievements

- Participant – Smart India Hackathon (SIH), national-level government innovation challenge
- Merit Certificate – Mathematics Olympiad, MIT ADT University
