Rahul Janardhan Salve

+91 8180054710 | rahulsalve4710@gmail.com | linkedin.com/in/rahul-salve | MIT ADT University, Pune

Professional Summary

B.Tech Electronics Computer Engineering student (2022–2027) with hands-on experience across AI/GenAI (LangChain, RAG) and full-stack de- velopment. Built and shipped end-to-end systems including an NLP-powered resume builder, a RAG-based forensic audio analyzer, and a face/voice recognition attendance system. Currently building an IoT + computer vision smart trolley with a Firebase-backed companion app for automated retail billing. Eager to apply strong analytical thinking and problem-solving skills in AI/ML Engineering roles.

Education

MIT ADT University, Pune 2022 – 2027
B.Tech, Electronics & Computer Engineering (Pursuing) *CGPA: 6.36*
Relevant Coursework: Data Structures, Algorithms, Databases, Machine Learning, IoT

Dayanand Science College, Latur 2022
Class XII (HSC), Science with Mathematics *77.50%*

Shree Sadanand Mahavidyalay, Latur 2020
Class X (SSC) *93.60%*

Technical Skills

Engineering Fundamentals:	Analytical Modeling, Model Preparation Concepts, Systems Thinking, Technical Documentation
Programming/Languages:	Python, SQL, JavaScript, Data Structures & Algorithms
Engineering Software (Learning):	ANSYS, HyperWorks – actively building proficiency for CAE/FEA workflows
Libraries & Tools:	Pandas, NumPy, Matplotlib, SQLAlchemy
Hardware/IoT:	Sensor Integration, Computer Vision, Real-Time Data Systems, Embedded Prototyping
Web / Frameworks:	Flask, Firebase, Full-Stack Development
Soft Skills:	Problem-Solving, Analytical Thinking, Attention to Detail, Project Management, Adaptability

Projects

Automatically Moving Smart Trolley with Automated Billing *Jan 2026 – Present*
- Integrating computer vision, IoT sensors, and autonomous navigation to build and evaluate a self-following retail cart system – including iterative setup, testing, and result validation cycles.
- Designed real-time item detection logic feeding into an automated billing and digital receipt pipeline.
- Built a Firebase-backed companion app to sync cart data, billing status, and user sessions in real time, applying structured data logging and reporting practices.

Forensic Audio Analyzer *Mar 2026 – Present*
- Combined Retrieval-Augmented Generation (RAG) with Python and an API to analyze voice recordings for authenticity, applying structured evaluation and result-review methodology.
- Built forensic-grade speech transcription pipeline for signal analysis use cases.

AI Resume Builder *Oct 2025*
- Built an NLP-powered tool that parses user input to generate ATS-friendly, professional resumes.

Attendance Monitoring System *Completed*
- Implemented face & voice recognition for real-time attendance tracking with timestamp logging (CSV/SQLite), including systematic result verification against ground truth.

Personal Website *Ongoing*
- Building a platform to showcase projects, skills, and professional journey.

Certifications & Training

- JavaScript Algorithms & Data Structures – freeCodeCamp
- SQL Essential Training – NASBA
- Flask with Full Stack Web Development – LinkedIn Learning
- Python – LinkedIn Learning
- AI in Healthcare: Opportunities (Workshop) – IIT Madras

Achievements & Activities

- Merit Certificate – Mathematics Olympiad, MIT ADT University
- Participant – Smart India Hackathon (SIH), national-level government innovation challenge
- Workshop – AI in Healthcare: Opportunities (IIT Madras)
